

Global Institute for Water, Environment and Health Environment and Water Governance Training Program

PROGRAM OVERVIEW

This program serves as a platform for exchanging experience and knowledge on water, environment and health between experts, scientists and researchers from different countries and backgrounds.

The program touches upon the challenges of equal access to water, maintenance of healthy environment, sustainable development and environmental responsibility, as well as policy and decision making in the field of water resources management, and other.

The program provides a wide vision of new approaches to water resources management based on green economy concept, new green technologies, etc. The program develops a vision that helps to improve socio-economic well-being beyond current levels by moving to an integrated approach, including health and gender aspects, etc.

The participants benefit from experiences of other regions and different approaches to understanding constraints in water policy implementation. In addition, the program provides a unique chance to visit some of the Geneva-based international organizations and learn more about their role and programs on water management.

OBJECTIVES

Following are the main objectives of this program:

- To conduct a series of thematic workshops in order to gain new knowledge and share professional experience.
- To provide networking opportunities and exchanging expertise and experience between international experts in the field of water management, including environmental and health aspects.
